                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to hybrid anti-Rhesus (Rh) antibody comprising an immunoglobulin (Ig)G anti-Rh antibody which comprises two light chains and two heavy chains where the heavy chains have a carboxy terminal with a polymeric tailpiece and an amino terminal. The antibodies are used in a one-step haemagglutinin test to provide Rh phenotyping of blood and as therapeutic or prophylactic agents for preventing haemolytic disease in newborns due to Rh incompatibility. The present sequence is IgG3 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Hybrid immunoglobulin G anti-Rhesus antibody for use in one-step kh phenotyping of blood or as a prophylactic agent to prevent hemolytic disease in newborns due to Rh incompatibility, comprises a polymeric

The invention relates to a novel c-Met protein tyrosine kinase antibody cor its antigen binding portion that specifically binds to c-Met. The c-Met antibody comprises any one of 160 fully defined sequence of 238, CC 244, 240, 250, 251, 242, 245, 247, 246, 253, 249, 243, 241, etc., amino acids as given in the specification, or its fragment. The invention CC further comprises: a pharmaceutical composition comprising the c-Met protein tyrosine kinase antibody and a carrier; an isolated cell that comprises and a carrier; an isolated cell that produces the c-Met protein tyrosine kinase antibody; and an isolated comprises and uncleic acid sequence that encodes a heavy chain or its antigen-binding portion or light chain or its compitation.

The c-Met protein tyrosine kinase antibody has cytostatic, and osteopathic activities. The c-Met protein tyrosine kinase antibody is useful for the manufacture of medicament for the treatment of cancer or composing the presence or ligation of c-Met expressing tissue. The c-Met protein tyrosine kinase antibody is useful for the treatment or prevention of ophthalmic composing the presence or ligation of c-Met expressing tissue. The c-Met protein tyrosine kinase antibody is useful for detecting c-Met in a biological sample in vitro or in vivo. The c-Met protein tyrosine kinase antibody is useful in the treatment or prevention of ophthalmic composition of c-Met protein tyrosine kinase antibody is useful for detecting c-Met in a biological sample in vitro or in vivo. The c-Met protein tyrosine kinase antibody is useful for detecting c-Met in a composition of c-Met protein tyrosine kinase antibody is useful for the treatment of associated with acute injury to the cycle of the treatment of composition of composition of composition of composition of composition of
                                                           sequence represents the protein of a \bar{\mbox{\footnotesize phage}} display generated human c-Met antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel c-Met protein tyrosine kinase antibody or its antigen-binding portion specifically binding to c-Met, useful for manufacture of medicament for treating cancer or tumor and for treatment of ophtha

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The DNA sequence of eleven monoclonal antibodies are represented in Q119145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols. having varied binding specificity. The chimaeric anti-RhD antibodies can be used for diagnosis and therapy, and are capable of providing blood-typing reagents of high specificity and reliability. They can also be used in passive immunisation to prevent haemolytic disease of the newborn. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be CC used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, cancerine CC disorder, neurological disorders, developmental disorders, or CC infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from without in the province of the printed specification, but was obtained in electronic format directly

The present invention describes a human monoclonal antibody (I) that CC specifically binds to tumour necrosis factor-alpha (TNFa) and comprises: CC (a) a heavy chain complementarity determining region 1 (CDR1) having the CC two.fully defined 5 amino acid sequence (31, ADP2241) or (32, ADP22421); CC and (b) a light chain CDR1 having the two fully defined 11 amino acid compenses (33, ADP22418) or (54, ADP22424). Also described: (1) assaying CC (M1) the level of TNFa in a patient sample, comprising contacting with CC (I), and detecting the level of binding between the antibody and TNFa in the sample; (2) a composition comprising the antibody or its functional conspiration of the sample; (2) a composition comprising the antibody or its functional composition comprising the antibody or its functional composition of (11); and treating (M2) an animal suffering from a composition of (11); and (11) and (11) and (12) an animal suffering the human conclonal antibody of (11); and (12) an animal in need of treatment for TNFa induced apoptosis by administering the human monoclonal antibody of (11). (1) has anabolic, antiarteriosclerotic, antiarthritic, antiarthritic, antiarteriosclerotic, antiarthritic, and and antiapoptoric antiarthritic, antiarthritic, and and antiapoptoric antiarthritic, antiarthritic, and antiarthritic, and antiarthritic, and antiarthritic, and antiarthritic, and antiarth
                                                                            disease, graft-host reactions, septic shock, cachexia, anorexia, and multiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              human; monoclonal antibody; tumour necrosis factor-alpha; TNFa; anti-TNFa antibody; anabolic; antiarteriosclerotic; antiarthritic; antibacterial; antiinflammatory; antiporiatic; antirheumatic; eating-disorder; immunomodulator; immunosuppressive; nephrotropic; neuroprotective; vasotropic; antiapoptotic; TNFa antiagonist; TNF induced apoptosis; neoplastic disease; breast cancer; ovarian cancer; bladder cancer; lung cancer; glioblastoma; stomach cancer; endometrial cancer; kidney cancer; colon cancer; parostrate cancer; immuno-mediated inflammatory disease; psoriasis; restenosis; autoimmune disease; Crohn's disease; psoriasis; restenosis; autoimmune disease; Crohn's disease; psoriasis; cancer; autoimmune disease; Crohn's disease; psoriasis; cancer; autoimmune disease; Crohn's disease; psoriasis; cancer; cancer; autoimmune disease; Crohn's disease; cancer; cance

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Best Local Similarity
(a) a heavy chain complementarity determining region 1 (CDR1) having the two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421); and (b) a light chain CDR1 having the two fully defined 11 amino acid sequence (S3, ADP22418) or (S4, ADP22424). Also described: (1) assaying (M1) the level of TNFa in a patient sample, comprising contacting with (I), and detecting the level of binding between the antibody and TNFa in the sample; (2) a composition comprising the antibody and TNFa in the sample; (2) a composition comprising the antibody or its functional fragment and a carrier; (3) treating (M2) an animal suffering from a nanimal in need of treatment for the disease by administering the human monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        anti-TNFa antibody; anabolic; antiarteriosclerotic; antiarthritic; antiarthribecterial; antiinflammatory; antipsoriatic; antirheumatic; eating-disorder; immunomodulator; immunosuppressive; neptrotropic; neuroprotective; vasotropic; antiapoptotic; TNFa antagonist; TNF induced apoptosis; neoplastic disease; breast cancer; ovarian cancer; bladder cancer; lung cancer; glioblastoma; stomach cancer; endometrial cancer; kidney cancer; colon cancer; pancreatic cancer; prostrate cancer; immuno-mediated inflammatory disease; prostrate cancer; immuno-mediated inflammatory disease;
                                                                                                                                                                                                                                                                                                                                             New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CC apoptosis in an animal by selecting an animal in need of treatment for TNFa induced apoptosis by administering the human monoclonal antibody of CC (I). (I) has anabolic, antiarteriosclerotic, antiarthritic, CC antibacterial, antiinflammatory, antipsoriatic, antirheumatic, eating-CC disorders, immunomodulator, immunosuppressive, nephrotropic, CC neuroprotective, vasotropic and antiapoptocic activities, and can be used CC neuroprotective, vasotropic and antiapoptocis, neophrastic of sease such as TNFa antagonist. The antibody (I) is useful in the preparation of CC medicament for treating TNF induced apoptosis, neophastic disease such as the stomach cancer, ovarian cancer, bladder cancer, lung cancer, glioblastoma, CC stomach cancer, endometrial cancer, kidney cancer, colon cancer, CC pancreatic cancer, and prostrate cancer; or immuno-mediated inflammatory CC diseases such as rheumatoid arthritis, glomerulonephritis, color cancer, and prostrate cancer, accompany and the sease, graft-host reactions, septic shock, cachexia, anorexia, and CC multiple sclerosis. The present sequence represents a human anti-TNFa antibody light chain variable region, which is used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches 103;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
            Novel antibody that immunospecifically binds to a B lymphocyte stimulator (BLys), useful for detecting and treating diseases or disorders e.g. rheumatoid arthritis, asthma and leukemia.

                                       This invention relates to novel antibodies that immunospecifically bind CC to B lymphocyte stimulator (BLyS). The BLyS gene has been mapped to CC chromosome 13934 and encodes a protein that is a member of the tumour necrosis factor superfamily and induces both in vivo and in vitro B cell CC chain antibody molecules (scFws) derived, preferably, it refers to single CC chain antibody molecules (scFws) derived, preferably, from the variable cheavy CPR3 region that immunospecifically bind to a polypeptide, or CC fragment invention refers to the use of such antibodies in various methods compressed invention refers to the use of such antibodies in various methods compressed invention or inappropriate function of BLyS or its receptor. As such, these compositions are useful for identifying immune disorders compositions are useful for identifying immune disorders such these compositions are useful for identifying immune disorders compositions are useful for identifying immune disorders such as AIDS and proliferative disorders including leukaemia, carcinoma and CC lymphoma. Accordingly, they can be described as exhibiting various activities such as antixheumatic, antialtergic and cytostatic. This complete sequence is a single chain antibody that binds BLyS of the printed specification, but was obtained in electronic format condirectly from WIPO at ftp. wipo.int/pub/published pct_sequences.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        525.5

#### **Protein Sequence Searches - February 2005**

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein. Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 QVQLVESGGGVVQPGRSLRL.....VTGSPTLDYWGQGTLVTVSS 119

Ig heavy chain V region - human (fragment)
C;Species: Homo sapiens (man)
C;Species: 22-Nov-1993 #sequence_revision 10-Nov-1995 #text_change 23-Jul-1999
C;Accession: S31679
R;Cuisinier, A.M.; Gauthier, L.; Boubli, L.; Fougereau, M.; Tonnelle, C.
submitted to the EMBL Data Library, June 1992
A;Description: Mechanisms that generate human immunoglobulin diversity operate from A;Reference number: S31585
A;Accession: S31679
A;Status: preliminary
A;Molecule type: mRNA
A;Residues: 1-134 <CUI>A;Residues: 1-134 <CUI>A;Cross-references: EMBL: Z14203; NID:g30965; PIDN:CAA78572.1; PID:g30966
C;Superfamily: immunoglobulin V region; immunoglobulin homology
C;Keywords: heterotetramer; immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A;Status: preliminary; nucleic acid sequence not shown; translation A;Molecule type: mRNA A;Residues: 1-122 <RAA>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Bur. XX The invention provides a neuromodulatory agent (I) capable of promoting neurite outgrowth, regeneration, remyelination and neuroprotection in central nervous system (CNS). (I) is capable of inducing remyelination, promoting cellular proliferation of glial cells, and promoting Ca2+ signaling with oligodendrocytes. An humanised antibody to (I) can be selected from antibody sHIgM22 (LYM 22), ebvHigM MSI19D10, ebv HIgM CB2bB6, AKUR4, CB2iE12, CB2iE7 or MSI19E5. (I) is useful for stimulating remyelination of CNS axons, stimulating proliferation of glial cells in CNS axons, or treating demyelinating disease of CNS in a mammal in need of such therapy. (I) is capable of binding to structures and cells within

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS CC of a mouse infected with Strain DA of Theiler's murine encephalomyelitis CC (TMEW) or for treating a human being having multiple sclerosis, or a CC human or domestic animal with a viral demyelinating disease, or a post-cural disease of CNS. (I) is also useful for an in vitro method of CNS stimulating the proliferation of glial cells from mixed cell culture. (I) CC is also useful for stimulating remyelination of CNS axons. The antibodies CC are useful for preventing infection by a bacterium, virus or like CC are useful for envelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful CC for treating multiple sclerosis, Parkinson's disease, Alzheimer's CC disease, Amyotrophic lateral sclerosis (ALS), a viral demyelinating CC disease, and other conditions in the CNS where nerves are CC damaged as by trauma. The present sequence represents the sHigM22 heavy CC chain variable region clone A amino acid sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        გ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC signaling with oligodendrocytes. An humanised antibody to (I) can be celected from antibody sHrgM22 (LYM 22), abvHigM MsI19D10, ebv HigM CC CB2bB8, AKJR4, CB2iE12, CB2iE7 or MSI19E5. (I) is useful for stimulating CC CB2bB8, AKJR4, CB2iE12, CB2iE7 or MSI19E5. (I) is useful for stimulating CC CNS axons, or treating demyelinating proliferation of glial cells in CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS in a mammal in need CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS cof a mouse infected with Strain DA of Theiler's murine encephalomyelitis (TMTMY) or for treating a human being having multiple sclerosis, or a CC (TMTMY) or for treating a human being having multiple sclerosis, or a cc (TMTMY) or for treating a human being having multiple sclerosis, or a post-neural disease of CNS. (I) is also useful for an in vitro method of CC stimulating the proliferation of glial cells from mixed cell culture. (I) is also useful for preventing infection by a bacterium, virus or like cause demyelination or other neurodegenerative condition in a subject. Methods where (I) is administered to a patient are useful CC disease, amyotrophic lateral sclerosis, Parkinson's disease, Alzheimer's CC disease, amyotrophic lateral sclerosis (ALS), a viral demyelinating cd damaged as by trauma. The present sequence represents the sHigM22 heavy conditions or the conditions of the

                                    The invention relates to a specific binding agent, which comprises at least one peptide selected from any of 62 peptides (ABR55769-830) or its fragment. The binding agents are antibodies that recognize and bind to angiopoletin-2 (Ang-2). The specific binding agent, particularly the antibody, is useful for inhibiting undesired angiogenesis, treating cancers, inhibiting undesired angiogenesis, modulating or inhibiting Ang-2 activity, modulating vascular permeability or plasma leakage, or treating a disease (e.g. ocular neovascular disease, obesity, haemangioblastoma, haemangioma, arteriosclerosis, inflammatory disease, inflammatory disease, atherosclerosis, endometriosis, neoplastic disease, bone-related disease, or psoriasis) in a mammal. The present sequence represents a heavy chain variable region of an anti-Ang-2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Region

                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes a virus-like particle or gene delivery vehicle comprising a ligand capable of binding to a human amino acid transporter. The method is useful for the target delivery of substances to cells e.g. gene therapy. A human cationic amino acid transporter (hCAT1) targeted adenovirus is useful for local applications of adenoviral vector e.g. in patients with restenosis following balloon angioplasty where smooth muscle cells need to be transduced with an adenoviral vector carrying the CeNOS cDNA. More efficient transduction of tissues can be carried out therefore resulting in lower multiplicity's of infections that can be used and therefore less vector associated toxicity to the tissues surrounding the target cells. AAZ38737 to AAZ38770, and AAY56264 to AAY56287 represent sequences used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY56287;

CC vehicle (I) provided with a ligand capable of binding to a human amino CC acid transporter. (I) is used to deliver genes to human cells or primate CC cells that express the hCAT1 amino acid transporter, such as endothelial. CC haematopoietic or smooth muscle cells, as part of a gene therapy regime. CC The vectors are especially useful for providing local applications of CC adenoviral vector to patients with restences following balloon CC angioplasty, where smooth muscle cells need to be transduced with ceNOS CC CDNA, for example. (I) may also be used to pseudotype recombinant type CC retrovirus including murine leukemia retroviruses and lentiviruses. In CC many cell types as possible is required. The new gene delivery vehicles transduce DNA more efficiently and specifically into tissues that are CC compared to a wildtype adenoviral vector. This increased specificity CC compared to a wildtype adenoviral vector. This increased specificity CC results in lower multiplicities of infection which can occur with prior CC art vectors, so preventing tissue toxicity. In addition the new vectors and tissues, which increases their efficiency for use as gene CC increases the potential host cells that are in low abundance in cell therapy vehicles. The alteration of the ligand on the viral envelope CC increases the potential host cell range of these vehicles. The present or present invention a hCAT1 binding human antibody molecule from the

                                                                                                                                                                                                                                                                                                                                                        CC (Ig) heavy chain variable (VH) domain and an Ig light chain variable (VL) CC domain. The protein binds a complex comprising a major histocompatibility CC complex (MHC) and a peptide, does not substantially bind the peptide complex (CC MUCL). Tak or hTERT. Also described: (1) a pharmaceutical composition of the MHC. The peptide is a peptide fragment of gp100, CC MUCL). Tak or hTERT. Also described: (1) a pharmaceutical composition of comprising the novel protein and a carrier; (2) a cytotoxic T cell comprising the novel protein and a carrier; (2) a cytotoxic T cell comprising the bound peptide, does not substantially bind the MHC in the absence of the MHC, and does not substantially bind the MHC comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a comprising a first segment that encodes the Ig variable domain; (4) a convel protein; (5) a transgenic animal whose genome includes heterologous nucleic acid sequences that encode the protein; (6) identifying the covel protein; (8) a transgenic animal whose genome includes heterologous concleic acid sequences that encode the protein; (6) identifying the covel protein; (8) ablating or killing a target cell that complex in a sumple. A protein of the invention has cytostatic activity, and composition for treating or preventing a cancerous disorder. The present of composition for treating or preventing a cancerous disorder. The present of composition for treating or preventing a cancerous disorder. The present of composition for treating or preventing a cancerous disorder. The present of composition for treating or preventing a cancerous disorder. The present of composition for treating or preventing a cancerous disorder.

                                                                                                                                                                                                                                                                                                                                   The invention comprises a human monoclonal antibody that binds to phospholipase A2 (PLA2). The monoclonal antibody of the invention is useful in the preparation of a medicament for the treatment of inflammatory and degenerative disorders stemming from inflammatory reactions in the joints, skin, and blood vessels, arthritis, psoriasis, asthma, Alzheimer's disease, atheroscierosis, and restenosis. The present amino acid sequence represents the heavy chain from a monoclonal antibody that is specific for the human phospholipase A2 (PLA2) enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Jia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (ABGE-)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New human monoclonal antibody that binds to phospholipase A2 (PLA2), useful for treating inflammatory conditions, e.g. arthritis, psorias asthma, Alzheimer's disease, atherosclerosis, or restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   joint inflammatory reaction; skin inflammatory reaction; blood vessels inflammatory reaction; arthritis; psoriasis; asthma; Alzheimer's disease; atherosclerosis; restenosis; heavy chain.

New recombinant human monoclonal antibody that specifically binds to Tumor Necrosis Factor-alpha, useful for treating neoplastic disease such as cancers, or immuno-mediated inflammatory diseases such as rheumatoid

Example 10; SEQ ID NO 190; 213pp; English

CC (a) a heavy chain complementarity determining region 1 (CDR1) having the CC two fully defined 5 amino acid sequence (S1, ADP22417) or (S2, ADP22421); CC and (b) a light chain CDR1 having the two fully defined 1 amino acid Sequence (S3, ADP22418) or (S4, ADP22424). Also described: (1) assaying (MM1) the level of TNFa in a patient sample, comprising contacting with CC (I), and detecting the level of binding between the antibody and TNFa in the sample; (2) a composition comprising the antibody or its functional CC fragment and a carrier; (3) treating (M2) an animal suffering from a CC enoplastic, or an immuno-mediated inflammatory disease by selecting an CC animal in need of treatment for the disease by administering the human CC monoclonal antibody of (I); and (4) inhibiting (M3) TNFa induced CC apoptosis in an animal by selecting an animal in need of treatment for CC (I). (I) has anabolic, antiarteriosclerotic, antiarthritic, eating-CC (I). (I) has anabolic, antiarteriosclerotic, pancreatic cancer, and prostrate cancer; or immuno-mediated inflammatory diseases such as rheumatoid arthritis, glomerullonephritis, atherosels psoriasis, restrates, autoimmune disease, Crohn's disease, graft-host reactions, septic shock, cachexia, anorexia, and multiple sclerosis. The present sequence represents a human anti-TNFa antibody heavy chain variable region, which is used in the The present invention describes a human monoclonal antibody (I) that specifically binds to tumour necrosis factor-alpha (TNFa) and compri(a) a heavy chain complementarity for a line of the comprise of the complementarity for the comprise of the comprise 얁 comprises:

XX WP The invention relates to vascular endothelial growth factor (VEGF)-2 antibodies. VEGF-2 antibodies are useful for treating, preventing or ameliorating a disease or disorder, such as inflammatory diseases or disorders, proliferative disorders, tumours, tumour metastasis, breast cancer, brain cancer, prostate cancer, colon cancer, lymphangioma, an infectious disease, Kaposi's sarcoma, an autoimmune disease, rheumatoid arthritis, psoriasis, diabetic retinopathy, a disease or disorder associated with aberrant VEGF-2 (receptor) expression, or a disease or disorder associated with the lack of VEGF-2 (receptor) function. The antibody is also useful for detecting, diagnosing, prognosing, or monitoring cancers and other hyperproliferative disorders. VEGF-2 is also used antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                     The invention relates to a human monoclonal antibody or fragment capable of specifically binding to a human CD40 antigen (a glycoprotein expressed on the surface of human B cells), where the antibody or fragment is free of significant agonistic activity when it binds to the CD40 antigen, and the growth or differentiation is inhibited. The fragments comprise the complementarity determining region (CDR) of the light and heavy chains of the monoclonal antibodies secreted by a hybridoma consisting of 1588, CC 20C4, 12D9, 9F7 and 13B4. Also included are the nucleic acids encoding the antibody (or fragments). The antibodies or fragments are used for inhibiting proliferation, growth or differentiation of a normal human B CC cells and to inhibit antibody production by B cells. They may also be cells and to inhibit antibody production by B cells. They may also be cerythematosus, psoriasis, multiple sclerosis, inflammatory bowel disease (Crohn's disease), rheumatoid arthritis, and lymphoma (especially Non-CC Hodgkin's Lymphoma). The present sequence represents the antibody 9F7 heavy chain variable region VH.1

                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel antibody that specifically binds to a GMAD polypeptide comprising a first amino acid sequence that is at least 95% identical to a second amino acid sequence of a VH CDR (complementarity determining region) or VL CDR of an scPv (single chain antibody molecule). The antibody of the invention demonstrates antidiabetic activity and may be useful for diagnosing, monitoring, treating, preventing or ameliorating type II diabetes. The current sequence is that of the human scPv protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody that specifically binds to GMAD polypeptide, useful for diagnosing, monitoring, treating, preventing or ameliorating type II diabetes.

                                                                                                                                                                                         ફ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a novel method of determining the ability of an cimmunoglobulin single domain to bind to a target in an intracellular cenvironment comprising assessing the intracellular interaction between the immunoglobulin domain and the target by monitoring the signal. The method comprises providing a first molecule and a second molecule, where central interaction of the first molecule and a second molecule, where the stable interaction of a signal; providing a single intracellular immunoglobulin central intracellular immunoglobulin domain which is associated with the first molecule, where the single intracellular interaction of the signal, and assessing the intracellular interaction of the signal. The methods are useful for determining the ability of an complobulin single domain to bind to a target in an intracellular cenvironment. The present sequence is that of a single chain variable continual (scFv) protein which was used to illustrate the method of the

                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to novel immunoglobulin molecules that comprise at CC least one antibody variable chain VH or VL framework region and are CC capable of binding to a specific antigens within an intracellular CC environment. Specifically, it refers to antibodies that can form an CC insoluble complex with a cognate antigen, such that it can then be target for degradation via the lysosome or proteosome systems. The present CC invention describes the specific target antigen as the oncogenic fusion CC protein BCR-ABL or the RAS antigen, such that this method can be used to prepare a cytostatic medicament for the cytoplasmic degradation or CC intracellular relocation of such an antigen or for the treatment of the specific antigen positive cancer i.e. leukaemia or lymphoma. Furthermore, the immunoglobulins may also be used for therapeutic, prophylactic or CC diagnostic applications both in vitro and in vivo, as well as for assay CC and reagent applications or in functional genomics. This polypeptide sequence is a variable heavy chain (VH) framework region of an intracellularly binding anti-ABL antibody of the invention.
                                                                                                                                                                                                                                                             Query Match

                                                                                                           Ś
                                                                                                                                                                                                                                The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be cc used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorder, endocrine CC autoimmune/inflammatory disorders, gastrointestinal disorder, endocrine CC disorder, neurological disorders, gastrointestinal disorder, or infections caused by virus, bacteria, fungi or parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the convention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm
